😭 Abnova	Product Information
Gene Summary	The protein encoded by this gene is a member of the peptidyl-prolyl cis-trans isomerase (PPlase) family. PPlases catalyze the cis-trans isomerization of proline imidic peptide bonds in oligopeptid es and accelerate the folding of proteins. This protein contains a highly conserved cyclophilin (CY P) domain as well as an RNA-binding domain. It was shown to possess PPlase and protein foldin g activities and also exhibit RNA-binding activity. Three alternatively spliced transcript variants en coding distinct isoforms have been observed.
