Gene Description WAS protein family, member 3

Omim ID [605068](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a member of the Wiskott-Aldrich syndrome protein family. The gene product is a protein that forms a multiprotein complex that links receptor kinases and actin. Binding to actin occurs through a C-terminal verprolin homology domain in all family members. The multiprotein complex serves to transduce signals that involve changes in cell shape, motility or function. [provided by RefSeq]
