Gene Name	LILRA2
Gene Alias	CD85H, ILT1, LIR-7, LIR7
Gene Description	leukocyte immunoglobulin-like receptor, subfamily A (with TM domain), member 2
Omim ID	604812
Gene Ontology	Hyperlink
Gene Summary	Leukocyte Ig-like receptors (LIRs) are a family of immunoreceptors expressed predominantly on monocytes and B cells and at lower levels on dendritic cells and natural killer (NK) cells. All LIRs in subfamily B have an inhibitory function (see, e.g., LILRB1, MIM 604811). LIRs in subfamily A, with short cytoplasmic domains lacking an immunoreceptor tyrosine-based inhibitory motif (ITIM) and with transmembrane regions containing a charged arginine residue, may initiate stimulatory casc ades. One member of subfamily A (LILRA3; MIM 604818) lacks a transmembrane region and is p resumed to be a soluble receptor.[supplied by OMIM
Other Designations	leukocyte immunoglobulin-like receptor 7|leukocyte immunoglobulin-like receptor subfamily A me mber 2 soluble
