Gene Name CPSF6

Gene Alias CFIM, CFIM68, HPBRIL-4, HPBRIL-7

Gene Description cleavage and polyadenylation specific factor 6, 68kDa

Omim ID [604979](#)

Gene Ontology [Hyperlink](#)

Gene Summary The protein encoded by this gene is one subunit of a cleavage factor required for 3' RNA cleavage and polyadenylation processing. The interaction of the protein with the RNA is one of the earliest steps in the assembly of the 3' end processing complex and facilitates the recruitment of other processing factors. The cleavage factor complex is composed of four polypeptides. This gene encodes the 68kD subunit. It has a domain organization reminiscent of spliceosomal proteins. [provided by RefSeq]
