Gene Description golgi associated, gamma adaptin ear containing, ARF binding protein 2

Omim ID [606005](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a member of the Golgi-localized, gamma adaptin ear-containing, ARF-binding (GGA) family. This family includes ubiquitous coat proteins that regulate the trafficking of proteins between the trans-Golgi network and the lysosome. These proteins share an amino-terminal VHS domain which mediates sorting of the mannose 6-phosphate receptors at the trans-Golgi network. They also contain a carboxy-terminal region with homology to the ear domain of gamma-adaptins. This family member may play a significant role in cargo molecules regulation and clathrin-coated vesicle assembly. [provided by RefSeq]

Other Designations ADP-ribosylation factor binding protein 2[VHS domain and ear domain-containing protein]
