Gene Summary	This gene encodes a nuclear protein belonging to the hairy and enhancer of split-related (HESR) f amily of basic helix-loop-helix (bHLH)-type transcriptional repressors. Expression of this gene is i nduced by the Notch and c-Jun signal transduction pathways. Two similar and redundant genes in mouse are required for embryonic cardiovascular development, and are also implicated in neurog enesis and somitogenesis. Alternative splicing results in multiple transcript variants. [provided by RefSeq
