Product Information

Gene Ontology	<u>Hyperlink</u>
Gene Summary	The protein encoded by this gene was identified on the basis of its interaction with MAP3K12/DL K, a protein kinase known to be involved in the induction of cell apoptosis. This gene product cont ains a leucine zipper, which is a characteristic motif of transcription factors, and was shown to exh ibit strong transactivation activity when fused to Gal4 DNA binding domain. Overexpression of this gene interfered with MAP3K12 induced apoptosis. [provided by RefSeq
