Gene Description peptidylprolyl isomerase (cyclophilin)-like 1

Omim ID [601301](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene is a member of the cyclophilin family of peptidylprolyl isomerases (PPases). The cyclophilins are a highly conserved, ubiquitous family, members of which play an important role in protein folding, immunosuppression by cyclosporin A, and infection of HIV-1 virions. Based on similarity to other PPases, this protein could accelerate the folding of proteins and might catalyze the cis-trans isomerization of proline imidic peptide bonds in oligopeptides.
