## Gene Info — FNBP1L

**Entrez GeneID** [54874](#)

**GeneBank Accession#** [NM\\_017737](#)

Protein Accession#	<a href="#">NP_060207.2</a>
Gene Name	FNBP1L
Gene Alias	C1orf39, TOCA1
Gene Description	formin binding protein 1-like
Omim ID	<a href="#">608848</a>
Gene Ontology	<a href="#">Hyperlink</a>
Gene Summary	The protein encoded by this gene binds to both CDC42 and N-WASP. This protein promotes CD C42-induced actin polymerization by activating the N-WASP-WIP complex and, therefore, is involved in a pathway that links cell surface signals to the actin cytoskeleton. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq]
Other Designations	transducer of Cdc42-dependent actin assembly 1
