VPS35 rabbit monoclonal antibody

Catalog # H00055737-K

ocification

Size 100 ug x up to 3

Specification	
Product Description	Rabbit monoclonal antibody raised against a human VPS35 peptide using ARM Technology.
Immunogen	A synthetic peptide of human VPS35 is used for rabbit immunization. Customer or Abnova will decide on the preferred peptide sequence.
Host	Rabbit
Library Construction	Non-fusion antibody library from rabbit spleen (ARM Technology).
Expression	Overexpression vector and transfection into 293H cell line.
Reactivity	Human
Purification	Protein A
lsotype	lgG
Quality Control Testing	Antibody reactive against human VPS35 peptide by ELISA and mammalian transfected lysate by W estern Blot.
Storage Buffer	In 1x PBS, pH 7.4
Storage Instruction	Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.
Deliverable	Up to three rabbit IgG clones of 100 ug each will be delivered to customer.
Note	 Customer may provide cell or tissue lysate for antibody screening. Rabbit monoclonal antibody generated by ARM technology is amenable to antibody engineering in cluding F(ab)₂, lgG, scFv and different Fc and non-Fc conjugates per customer request.

Applications

• Western Blot (Transfected lysate)

Protocol Download

• ELISA

Gene Info — VPS35

omponent of a large multimeric complex, termed the retromer complex, involved in retrograde sport of proteins from endosomes to the trans-Golgi network. The close structural similarity be en the yeast and human proteins that make up this complex suggests a similarity in function.		
Gene Name VPS35 Gene Alias DKFZp434E1211, DKFZp434P1672, FLJ10752, FLJ13588, FLJ20388, MEM3 Gene Description vacuolar protein sorting 35 homolog (S. cerevisiae) Omim ID 606931 Gene Summary Hyperlink Gene Summary This gene belongs to a group of vacuolar protein sorting (VPS) genes. The encoded protein i omponent of a large multimeric complex, termed the retromer complex, involved in retrograde sport of proteins from endosomes to the trans-Golgi network. The close structural similarity b en the yeast and human proteins that make up this complex suggests a similarity in function. ession studies in yeast and mammalian cells indicate that this protein interacts directly with V 5, which serves as the core of the retromer complex. [provided by RefSeq	Entrez GenelD	<u>55737</u>
Gene Alias DKFZp434E1211, DKFZp434P1672, FLJ10752, FLJ13588, FLJ20388, MEM3 Gene Description vacuolar protein sorting 35 homolog (S. cerevisiae) Omim ID 606931 Gene Ontology Hyperlink Gene Summary This gene belongs to a group of vacuolar protein sorting (VPS) genes. The encoded protein omponent of a large multimeric complex, termed the retromer complex, involved in retrograde sport of proteins from endosomes to the trans-Golgi network. The close structural similarity be en the yeast and human proteins that make up this complex suggests a similarity in function. ession studies in yeast and mammalian cells indicate that this protein interacts directly with V 5, which serves as the core of the retromer complex.
