Gene Description

testis-specific kinase substrate

Omim ID[608253](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

This gene may play a role in testicular physiology, spermatogenesis or spermiogenesis. Expression of the encoded protein is highest in the testis and down-regulated in testicular cancer. The gene is localized to the region 19q13.3 among the related RAS viral oncogene homolog (RRAS) and interferon regulatory factor 3 (IRF3) genes, which are both involved in tumorigenesis pathways and progression. Other Designations

testis specific serine/threonine kinase substrate
