Gene Name GMCL1L

Gene Alias GCL, GMCL2

Gene Description germ cell-less homolog 1 (Drosophila)-like

Gene Ontology [Hyperlink](#)

Gene Summary This locus shares a high degree of identity with the multi-exon germ cell-less gene on chromosome 2. Despite its single-exon nature, this chromosome 5 locus contains an open reading frame that could putatively encode a full-length germ cell-less related protein. [provided by RefSeq]
