Gene Name	OR10AD1
Gene Alias	OR10AD1P, OR12-1
Gene Description	olfactory receptor, family 10, subfamily AD, member 1
Gene Ontology	<a href="#">Hyperlink</a>
Gene Summary	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. Other Designations	olfactory receptor OR12-1 olfactory receptor, family 10, subfamily AD, member 1 pseudogene
