Gene Description ankyrin repeat and SOCS box-containing 11

Omim ID [300626](#)

Gene Ontology [Hyperlink](#)

Gene Summary The protein encoded by this gene is a member of the ankyrin repeat and SOCS box-containing (ASB) family of proteins. They contain ankyrin repeat sequence and SOCS box domain. The SOCS box serves to couple suppressor of cytokine signalling (SOCS) proteins and their binding partners with the elongin B and C complex, possibly targeting them for degradation. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq]
