Gene Description zinc finger protein 280B

Gene Ontology [Hyperlink](#)

Gene Summary This gene was identified by homology to other species. Its encoded protein is approximately 78-88% identical to a predicted sheep protein of unknown function. The protein is also approximately 25% identical to the Drosophila protein suppressor of hairy wing, which is a leucine zipper protein that represses the function of transcriptional enhancers of the gypsy retrotransposon. Other Designations suppressor of hairy wing homolog 2|zinc finger protein 279
