Gene Ontology	<u>Hyperlink</u>
Gene Summary	This gene encodes a member of the HtrA family of proteases. The encoded protein contains a put ative signal peptide, an insulin growth factor binding domain, a Kazal protease inhibitor domain, a conserved trypsin domain and a PDZ domain. Based on studies on other related family members , this enzyme may function as a secreted oligomeric chaperone protease to degrade misfolded s ecretory proteins. Other human HtrA proteins have been implicated in arthritis, tumor suppression, unfolded stress response, apoptosis, and aging. [provided by RefSeq
