Gene Name ANXA8

Gene Alias ANX8, FLJ53095

Gene Description annexin A8

Omim ID [602396](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a member of the annexin family of evolutionarily conserved Ca²⁺ and phospholipid binding proteins. The encoded protein may function as an anticoagulant that indirectly inhibits the thromboplastin-specific complex. Overexpression of this gene has been associated with acute myelocytic leukemia. A highly similar duplicated copy of this gene is found in close proximity on the long arm of chromosome 10. [provided by RefSeq]
