

# General Gene Knockdown Quantification Kit

Catalog # KA1542

Size 1 Kit

## Applications

### Result Data

Result Data

Quantification of HDAC1 knockdown in MCF-7 cells.

## Specification

|                            |   |
|----------------------------|---|
| <b>Product Description</b> | General Gene Knockdown Quantification Kit is used for measuring gene knockdown induced by siRNA or antisense oligonucleotide at the protein level.                              |
| <b>Suitable Sample</b>     | Cell, Tissue  |
| <b>Sample Volume</b>       | 10 uL (1:1 prediluted)  |
| <b>Label</b>               | HRP-conjugate   |
| <b>Detection Method</b>    | Colorimetric  |
| <b>Specificity</b>         | Mammalian cell extracts and tissue extracts   |
| <b>Regulation Status</b>   | For research use only (RUO)   |
| <b>Storage Instruction</b> | Store the detection antibody at -20°C. Store Q2, Q4, Q6, GAPDH control antibody and 8-well assay strips at 4°C away from light. Store all other components at room temperature. |
| <b>Note</b>                | Result Data<br>Result Data<br>Quantification of HDAC1 knockdown in MCF-7 cells.   |

## Applications

- Quantification
