Gene Summary	The protein encoded by this gene is a T cell-derived cytokine that shares sequence similarity with IL17. This cytokine was reported to stimulate the release of TNF alpha (TNF) and IL1 beta (IL1B) from a monocytic cell line. Immunohistochemical analysis of several nerve tissues indicated that this cytokine is primarily localized to neuronal cell bodies. [provided by RefSeq]
Other Designations	cytokine-like protein ZCYTO7 interleukin 20 interleukin-17 beta neuronal interleukin-17 related factor
