Gene Summary	This gene encodes a protein belonging to the 14-3-3 family of proteins, members of which mediat e signal transduction by binding to phosphoserine-containing proteins. This highly conserved prot ein family is found in both plants and mammals. The encoded protein has been shown to interact with RAF1 and CDC25 phosphatases, suggesting that it may play a role in linking mitogenic sign aling and the cell cycle machinery. Two transcript variants, which encode the same protein, have b een identified for this gene. [provided by RefSeq

Gene Summary	This gene product belongs to the 14-3-3 family of proteins which mediate signal transduction by bi nding to phosphoserine-containing proteins. This highly conserved protein family is found in both plants and mammals, and this protein is 99% identical to the mouse, rat and sheep orthologs. The encoded protein interacts with IRS1 protein, suggesting a role in regulating insulin sensitivity. Sev eral transcript variants that differ in the 5' UTR but that encode the same protein have been identified for this gene. [provided by RefSeq
