Result Data

Detection of Caspase 8 Activities in Jurkat cells. Jurkat cells were seeded on the same day at 200,000 cells/90 uL/well in a Costar black wall/clear bottom 96-well plate. The cells were treated with 1 uM staurosporine for 5 hours while the untreated cells were used as control. The caspase 8 assay loading solution (100 uL/well) was added and incubated at room temperature for 30 minutes. The fluorescence intensity was measured at Ex/Em = 490/525 nm with a FlexStation microplate reader (Molecular Devices).
