Gene Summary	The protein encoded by this gene is a proinflammatory cytokine produced by activated T cells. Thi s cytokine regulates the activities of NF-kappaB and mitogen-activated protein kinases. This cyto kine can stimulate the expression of IL6 and cyclooxygenase-2 (PTGS2/COX-2), as well as enhan ce the production of nitric oxide (NO). High levels of this cytokine are associated with several chro nic inflammatory diseases including rheumatoid arthritis, psoriasis and multiple sclerosis. [provid ed by RefSeq
