Gene Name FASN

Gene Alias FAS, MGC14367, MGC15706, OA-519, SDR27X1

Gene Description fatty acid synthase

Omim ID [600212](#)

Gene Ontology [Hyperlink](#)

Gene Summary

The enzyme encoded by this gene is a multifunctional protein. Its main function is to catalyze the synthesis of palmitate from acetyl-CoA and malonyl-CoA, in the presence of NADPH, into long-chain saturated fatty acids. In some cancer cell lines, this protein has been found to be fused with estrogen receptor-alpha (ER-alpha), in which the N-terminus of FAS is fused in-frame with the C-terminus of ER-alpha.
