

TLR4 monoclonal antibody, clone HTA125 (NaN3 Free)

Catalog # MAB0072 Size 100 ug

Specification

Product Description	Mouse monoclonal antibody raised against full length recombinant TLR4.
Immunogen	Recombinant protein corresponding to full length human TLR4.
Host	Mouse
Reactivity	Human
Form	Liquid
Isotype	IgG2a
Recommend Usage	The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS
Storage Instruction	Store at 4°C. For long term storage store at -20°C. Aliquot to avoid repeated freezing and thawing.

Applications

- Immunocytochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytometry

Gene Info — TLR4

Entrez GeneID

[7099](#)

Gene Name	TLR4
Gene Alias	ARMD10, CD284, TOLL, hToll
Gene Description	toll-like receptor 4
Omim ID	603030
Gene Ontology	Hyperlink
Gene Summary	<p>The protein encoded by this gene is a member of the Toll-like receptor (TLR) family which plays a fundamental role in pathogen recognition and activation of innate immunity. TLRs are highly conserved from Drosophila to humans and share structural and functional similarities. They recognize pathogen-associated molecular patterns (PAMPs) that are expressed on infectious agents, and mediate the production of cytokines necessary for the development of effective immunity. The various TLRs exhibit different patterns of expression. This receptor is most abundantly expressed in placenta, and in myelomonocytic subpopulation of the leukocytes. It has been implicated in signal transduction events induced by lipopolysaccharide (LPS) found in most gram-negative bacteria. Mutations in this gene have been associated with differences in LPS responsiveness. Also, several transcript variants of this gene have been found, but the protein coding potential of most of them is uncertain. [provided by RefSeq]</p>
Other Designations	OTTHUMP00000022807 homolog of Drosophila toll
