

Anti-Bevacizumab monoclonal antibody, clone 2C8-13

Catalog # MAB11128 Size 100 ug

Applications

Blocking

Anti-Bevacizumab monoclonal antibody, clone 2C8-13 (Cat # MAB11128) inhibits the interaction of Bevacizumab and its antigen VEGF.

Specification

Product Description	Mouse monoclonal antibody raised against F(ab)2 fragment of Bevacizumab. Target gene is VEGFA.
Immunogen	F(ab)2 fragment of Bevacizumab.
Host	Mouse
Specificity	Bevacizumab. This antibody is able to interfere the binding between Bevacizumab and VEGF.
Form	Liquid
Purification	Protein G purification
Isotype	IgG1
Recommend Usage	ELISA (2 ug/mL for coating) The optimal working dilution should be determined by the end user.
Storage Buffer	In TBS, pH 8.0 (0.09% sodium azide).
Storage Instruction	Store at 4°C for at least 12 months. For long term storage store at -80°C. Aliquot to avoid repeated freezing and thawing.

Note

This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Enzyme-linked Immunoabsorbent Assay
- Blocking

Anti-Bevacizumab monoclonal antibody, clone 2C8-13 (Cat # MAB11128) inhibits the interaction of Bevacizumab and its antigen VEGF.

Gene Info — VEGFA

Entrez GeneID [7422](#)

Gene Name VEGFA

Gene Alias MGC70609, VEGF, VEGF-A, VPF

Gene Description vascular endothelial growth factor A

Omim ID [125853](#) [192240](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene is a member of the PDGF/VEGF growth factor family and encodes a protein that is often found as a disulfide linked homodimer. This protein is a glycosylated mitogen that specifically acts on endothelial cells and has various effects, including mediating increased vascular permeability, inducing angiogenesis, vasculogenesis and endothelial cell growth, promoting cell migration, and inhibiting apoptosis. Elevated levels of this protein is linked to POEMS syndrome, also known as Crow-Fukase syndrome. Mutations in this gene have been associated with proliferative and nonproliferative diabetic retinopathy. Alternatively spliced transcript variants, encoding either freely secreted or cell-associated isoforms, have been characterized. There is also evidence for the use of non-AUG (CUG) translation initiation sites upstream of, and in-frame with the first AUG, leading to additional isoforms. [provided by RefSeq]

Other Designations vascular endothelial growth factor isoform VEGF165|vascular permeability factor
