

FAS monoclonal antibody

Catalog # MAB11146 Size 50 ug

Applications

Western Blot (Cell lysate)

Western blot analysis of FAS monoclonal antibody (Cat # MAB11146) at 1:1000 dilution.

Lane 1: HepG2 whole cell lysate 40 ug/lane.

Lane 2: A-431 whole cell lysate 40 ug/lane.

Lane 3: Jurkat whole cell lysate 40 ug/lane.

Predicted band size: 45 KDa. Observed band size: 52 KDa.

Specification

Product Description Mouse monoclonal antibody raised against partial recombinant protein of FAS.

Immunogen Recombinant protein corresponding to C-terminus of human FAS.

Host Mouse

Reactivity Human

Form Liquid

Purification Protein G purification

Recommend Usage ELISA (1:5000-1:20000)
Western Blot (1:100-1:2000)
The optimal working dilution should be determined by the end user.

Storage Buffer In PBS, pH 7.4 (50% glycerol, 0.02% sodium azide)

Storage Instruction Store at -20°C.
Aliquot to avoid repeated freezing and thawing.

Note

This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Cell lysate)

Western blot analysis of FAS monoclonal antibody (Cat # MAB11146) at 1:1000 dilution.

Lane 1: HepG2 whole cell lysate 40 ug/lane.

Lane 2: A-431 whole cell lysate 40 ug/lane.

Lane 3: Jurkat whole cell lysate 40 ug/lane.

Predicted band size: 45 KDa. Observed band size: 52 KDa.

- Enzyme-linked Immunoabsorbent Assay

Gene Info — FAS

Entrez GeneID [355](#)

Protein Accession# [P25445;NM_000043](#)

Gene Name FAS

Gene Alias ALPS1A, APO-1, APT1, CD95, FAS1, FASTM, TNFRSF6

Gene Description Fas (TNF receptor superfamily, member 6)

Omim ID [134637 601859](#)

Gene Ontology [Hyperlink](#)

Gene Summary

The protein encoded by this gene is a member of the TNF-receptor superfamily. This receptor contains a death domain. It has been shown to play a central role in the physiological regulation of programmed cell death, and has been implicated in the pathogenesis of various malignancies and diseases of the immune system. The interaction of this receptor with its ligand allows the formation of a death-inducing signaling complex that includes Fas-associated death domain protein (FADD), caspase 8, and caspase 10. The autoproteolytic processing of the caspases in the complex triggers a downstream caspase cascade, and leads to apoptosis. This receptor has been also shown to activate NF-kappaB, MAPK3/ERK1, and MAPK8/JNK, and is found to be involved in transducing the proliferating signals in normal diploid fibroblast and T cells. At least eight alternatively spliced transcript variants have been described, some of which are candidates for nonsense-mediated decay (NMD). The isoforms lacking the transmembrane domain may negatively regulate the apoptosis mediated by the full length isoform. [provided by RefSeq]
