

POMC monoclonal antibody, clone 2F6

Catalog # MAB11358 Size 100 ug

Specification

Product Description Mouse monoclonal antibody raised against partial POMC.

Immunogen N-terminal fragment of human POMC conjugated to KLH.

Host Mouse

Reactivity Human, Mouse, Rat

Form Liquid

Purification Protein A/G affinity chromatography

Isotype IgG1, kappa

Recommend Usage
Flow Cytometry (0.5-1 ug/million cells)
Immunofluorescence (0.5-1 ug/mL)
Immunohistochemistry (0.5-1 ug/mL for 30 min at RT)
Immunoprecipitation (0.5-1 ug/500 ug protein lysate)
Western Blot (0.5-0.1 ug/mL)
The optimal working dilution should be determined by the end user.

Storage Buffer In PBS, pH 7.4 (0.05% BSA, 0.05% sodium azide)

Storage Instruction Store at 4°C.

Note This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot
- Immunohistochemistry
- Immunofluorescence

- Immunoprecipitation
- Flow Cytometry

Gene Info — POMC

Entrez GeneID [5443](#)

Gene Name POMC

Gene Alias ACTH, CLIP, LPH, MSH, NPP, POC

Gene Description proopiomelanocortin

Omim ID [176830 609830](#)

Gene Ontology [Hyperlink](#)

Gene Summary

This gene encodes a polypeptide hormone precursor that undergoes extensive, tissue-specific, post-translational processing via cleavage by subtilisin-like enzymes known as prohormone convertases. There are eight potential cleavage sites within the polypeptide precursor and, depending on tissue type and the available convertases, processing may yield as many as ten biologically active peptides involved in diverse cellular functions. The encoded protein is synthesized mainly in corticotroph cells of the anterior pituitary where four cleavage sites are used; adrenocorticotrophin, essential for normal steroidogenesis and the maintenance of normal adrenal weight, and lipotropin beta are the major end products. In other tissues, including the hypothalamus, placenta, and epithelium, all cleavage sites may be used, giving rise to peptides with roles in pain and energy homeostasis, melanocyte stimulation, and immune modulation. These include several distinct melanotropins, lipotropins, and endorphins that are contained within the adrenocorticotrophin and beta-lipotropin peptides. Mutations in this gene have been associated with early onset obesity, adrenal insufficiency, and red hair pigmentation. Alternatively spliced transcript variants encoding the same protein have been described. [provided by RefSeq]
