

FGFR4 monoclonal antibody, clone 53CT32.19.3

Catalog # MAB12581 Size 200 uL

Applications

Western Blot (Recombinant protein)

Western blot analysis of FGFR4 recombinant protein with FGFR4 monoclonal antibody, clone 53CT32.19.3 (Cat # MAB12581).

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human uterus with FGFR4 monoclonal antibody, clone 53CT32.19.3 (Cat # MAB12581) at 10 ug/mL working concentration.

Specification

Product Description	Mouse monoclonal antibody raised against human FGFR4.
Immunogen	Recombinant protein corresponding to human FGFR4.
Host	Mouse
Reactivity	Human
Form	Liquid
Purification	Protein G purification
Isotype	IgG1, kappa

Recommend Usage	Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) (10 ug/mL) Western Blot (1:2000) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS (0.09% sodium azide).
Storage Instruction	Store at 4°C. For long term storage store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Recombinant protein)

Western blot analysis of FGFR4 recombinant protein with FGFR4 monoclonal antibody, clone 53CT32.19.3 (Cat # MAB12581).

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human uterus with FGFR4 monoclonal antibody, clone 53CT32.19.3 (Cat # MAB12581) at 10 ug/mL working concentration.

Gene Info — FGFR4

Entrez GeneID	2264
Gene Name	FGFR4
Gene Alias	CD334, JTK2, MGC20292, TKF
Gene Description	fibroblast growth factor receptor 4
Omim ID	134935
Gene Ontology	Hyperlink

Gene Summary

The protein encoded by this gene is a member of the fibroblast growth factor receptor family, where amino acid sequence is highly conserved between members and throughout evolution. FGFR family members differ from one another in their ligand affinities and tissue distribution. A full-length representative protein would consist of an extracellular region, composed of three immunoglobulin-like domains, a single hydrophobic membrane-spanning segment and a cytoplasmic tyrosine kinase domain. The extracellular portion of the protein interacts with fibroblast growth factors, setting in motion a cascade of downstream signals, ultimately influencing mitogenesis and differentiation. The genomic organization of this gene, compared to members 1-3, encompasses 18 exons rather than 19 or 20. Although alternative splicing has been observed, there is no evidence that the C-terminal half of the IgIII domain of this protein varies between three alternate forms, as indicated for members 1-3. This particular family member preferentially binds acidic fibroblast growth factor and, although its specific function is unknown, it is overexpressed in gynecological tumor samples, suggesting a role in breast and ovarian tumorigenesis. [provided by RefSeq]
