😭 Abnova	Product Information
Gene Summary	This gene encodes a 110-kD transmembrane glycoprotein that is highly expressed by human mo nocytes and tissue macrophages. It is a member of the lysosomal/endosomal-associated membr ane glycoprotein (LAMP) family. The protein primarily localizes to lysosomes and endosomes wit h a smaller fraction circulating to the cell surface. It is a type I integral membrane protein with a he avily glycosylated extracellular domain and binds to tissue- and organ-specific lectins or selectins. The protein is also a member of the scavenger receptor family. Scavenger receptors typically func tion to clear cellular debris, promote phagocytosis, and mediate the recruitment and activation of macrophages. Alternative splicing results in multiple transcripts encoding different isoforms. [provi ded by RefSeq
