Gene Description cystic fibrosis transmembrane conductance regulator (ATP-binding cassette sub-family C, member 7)

Omim ID [219700 277180 602421](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a member of the ATP-binding cassette (ABC) transporter superfamily. ABC proteins transport various molecules across extra- and intra-cellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, White). This protein is a member of the MRP subfamily that is involved in multi-drug resistance. The encoded protein functions as a chloride channel and controls the regulation of other transport pathways. Mutations in this gene are associated with the autosomal recessive disorders cystic fibrosis and congenital bilateral aplasia of the vas deferens. Alternatively spliced transcript variants have been described, many of which result from mutations in this gene. [provided by RefSeq]

Other Designations ATP-binding cassette sub-family C, member 7|cystic fibrosis transmembrane conductance regulator
