

ALK monoclonal antibody, clone ALK/1503

Catalog # MAB14792 Size 100 ug

Applications

Western Blot

Western Blot analysis of Lane 1: recombinant protein and Lane 2: HepG2 cell lysate with ALK monoclonal antibody, clone ALK/1503 (Cat # MAB14792).

Specification

Product Description	Mouse monoclonal antibody raised against partial recombinant human ALK.
Immunogen	Recombinant protein corresponding to amino acids 1360-1460 of human ALK.
Host	Mouse
Theoretical MW (kDa)	80, 200
Reactivity	Human
Form	Liquid
Purification	Protein A/G purification
Isotype	IgG1, kappa
Recommend Usage	Flow Cytometry (0.5-1 ug/10 ⁶ cells) Immunofluorescence (0.5-1 ug/mL) Western Blotting (0.5-1 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In 10 mM PBS.

Storage Instruction

Store at -20 to -80°C.
Aliquot to avoid repeated freezing and thawing.

Applications

- Western Blot

Western Blot analysis of Lane 1: recombinant protein and Lane 2: HepG2 cell lysate with ALK monoclonal antibody, clone ALK/1503 (Cat # MAB14792).

- Immunofluorescence

- Flow Cytometry

Gene Info — ALK

Entrez GeneID	238
---------------	---------------------

Protein Accession#	Q9UM73
--------------------	------------------------

Gene Name	ALK
-----------	-----

Gene Alias	CD246, Ki-1, TFG/ALK
------------	----------------------

Gene Description	anaplastic lymphoma receptor tyrosine kinase
------------------	--

Omim ID	105590
---------	------------------------

Gene Ontology	Hyperlink
---------------	---------------------------

Gene Summary	The 2;5 chromosomal translocation is frequently associated with anaplastic large cell lymphomas (ALCLs). The translocation creates a fusion gene consisting of the ALK (anaplastic lymphoma kinase) gene and the nucleophosmin (NPM) gene: the 3' half of ALK, derived from chromosome 2, is fused to the 5' portion of NPM from chromosome 5. A recent study shows that the product of the NPM-ALK fusion gene is oncogenic. The deduced amino acid sequences reveal that ALK is a novel receptor protein-tyrosine kinase having a putative transmembrane domain and an extracellular domain. These sequences are absent in the product of the transforming NPM-ALK gene. ALK shows the greatest sequence similarity to LTK (leukocyte tyrosine kinase). ALK plays an important role in the development of the brain and exerts its effects on specific neurons in the nervous system. [provided by RefSeq]
--------------	---

Other Designations	ALK tyrosine kinase receptor CD246 antigen anaplastic lymphoma kinase (Ki-1) anaplastic lymphoma kinase Ki-1
--------------------	--
