Gene Summary

The protein encoded by this gene is an isozyme of very long-chain acyl-CoA synthetase (VLCS). It is capable of activating very long-chain fatty-acids containing 24- and 26-carbons. It is expressed in liver and associated with endoplasmic reticulum but not with peroxisomes. Its primary role is in fatty acid elongation or complex lipid synthesis rather than in degradation. This gene has a mouse ortholog. [provided by RefSeq]

Other Designations

fatty-acid-Coenzyme A ligase, very long-chain 3|very long-chain acyl-CoA synthetase homolog 2|very long-chain acyl-CoA synthetase-related protein
