

IDH1 monoclonal antibody, clone CL0219

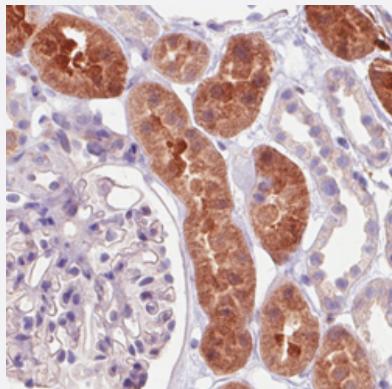

Catalog # MAB15566 Size 100 uL

Applications

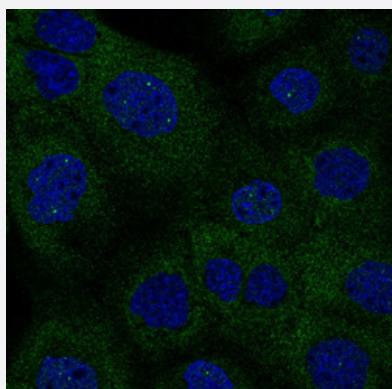

Western Blot (Cell lysate)

Western Blot analysis of RT-4 cell lysate with IDH1 monoclonal antibody, clone CL0219 (Cat # MAB15566).

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human kidney with IDH1 monoclonal antibody, clone CL0219 (Cat # MAB15566) shows strong positivity in a subset of renal tubules.

Immunofluorescence

Immunofluorescent staining of A-431 cells with IDH1 monoclonal antibody, clone CL0219 (Cat # MAB15566) (Green) shows specific staining in the cytosol and nuclear bodies. Microtubule and nuclear probes are visualized in red and blue, respectively (where available).

Specification

Product Description	Mouse monoclonal antibody raised against partial recombinant human IDH1.
Immunogen	Recombinant protein corresponding to human IDH1.
Epitope	This antibody binds to an epitope located within the peptide sequence IEDFAHSSFQMALSK as determined by overlapping synthetic peptides.
Sequence	FVVPGPGKVEITYTPSDGTQKVTLVHNFEEGGVAMGMYNQDKSIEDFAHSSFQMALSKGWPL Y
Host	Mouse
Reactivity	Human
Form	Liquid
Purification	Protein A purification
Isotype	IgG2a
Recommend Usage	Immunofluorescence (1-4 ug/mL) Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) (1:5000-1:10000) Western Blot (1:500-1:1000) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, pH 7.2 (40% glycerol, 0.02% sodium azide).
Storage Instruction	Store at 4°C. For long term storage store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Cell lysate)

Western Blot analysis of RT-4 cell lysate with IDH1 monoclonal antibody, clone CL0219 (Cat # MAB15566).

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human kidney with IDH1 monoclonal antibody, clone CL0219 (Cat # MAB15566) shows strong positivity in a subset of renal tubules.

- Immunofluorescence

Immunofluorescent staining of A-431 cells with IDH1 monoclonal antibody, clone CL0219 (Cat # MAB15566) (Green) shows specific staining in the cytosol and nuclear bodies. Microtubule and nuclear probes are visualized in red and blue, respectively (where available).

Gene Info — IDH1

Entrez GenelD	3417
Protein Accession#	O75874
Gene Name	IDH1
Gene Alias	IDCD, IDH, IDP, IDPC, PICD
Gene Description	isocitrate dehydrogenase 1 (NADP+), soluble
Omim ID	147700
Gene Ontology	Hyperlink
Gene Summary	Isocitrate dehydrogenases catalyze the oxidative decarboxylation of isocitrate to 2-oxoglutarate. These enzymes belong to two distinct subclasses, one of which utilizes NAD(+) as the electron acceptor and the other NADP(+). Five isocitrate dehydrogenases have been reported: three NAD(+-dependent isocitrate dehydrogenases, which localize to the mitochondrial matrix, and two NADP(+-dependent isocitrate dehydrogenases, one of which is mitochondrial and the other predominantly cytosolic. Each NADP(+-dependent isozyme is a homodimer. The protein encoded by this gene is the NADP(+-dependent isocitrate dehydrogenase found in the cytoplasm and peroxisomes. It contains the PTS-1 peroxisomal targeting signal sequence. The presence of this enzyme in peroxisomes suggests roles in the regeneration of NADPH for intraperoxisomal reductions, such as the conversion of 2, 4-dienoyl-CoAs to 3-enoyl-CoAs, as well as in peroxisomal reactions that consume 2-oxoglutarate, namely the alpha-hydroxylation of phytanic acid. The cytoplasmic enzyme serves a significant role in cytoplasmic NADPH production. [provided by RefSeq]
Other Designations	NADP+-specific ICDH NADP-dependent isocitrate dehydrogenase, cytosolic NADP-dependent isocitrate dehydrogenase, peroxisomal oxalosuccinate decarboxylase
