Gene Info — NOTCH3

Entrez GeneID	4854
Gene Name	NOTCH3
Gene Alias	CADASIL, CASIL
Gene Description	Notch homolog 3 (Drosophila)
Omim ID	125310 600276
Gene Ontology	Hyperlink
Gene Summary	This gene encodes the third discovered human homologue of the Drosophila melanogaster type I membrane protein notch. In Drosophila, notch interaction with its cell-bound ligands (delta, serrate) establishes an intercellular signalling pathway that plays a key role in neural development. Homologues of the notch-ligands have also been identified in human, but precise interactions between these ligands and the human notch homologues remains to be determined. Mutations in NOTCH3 have been identified as the underlying cause of cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy (CADASIL). [provided by RefSeq]
