Gene Info — BAD

Entrez GeneID	572
Gene Name	BAD
Gene Alias	BBC2, BCL2L8
Gene Description	BCL2-associated agonist of cell death
Omim ID	603167
Gene Ontology	Hyperlink
Gene Summary	The protein encoded by this gene is a member of the BCL-2 family. BCL-2 family members are k nown to be regulators of programmed cell death. This protein positively regulates cell apoptosis b y forming heterodimers with BCL-xL and BCL-2, and reversing their death repressor activity. Proa poptotic activity of this protein is regulated through its phosphorylation. Protein kinases AKT and MAP kinase, as well as protein phosphatase calcineurin were found to be involved in the regulatio n of this protein. Alternative splicing of this gene results in two transcript variants which encode the same isoform. [provided by RefSeq
