Gene Name	PLCG2
Gene Alias	-
Gene Description	phospholipase C, gamma 2 (phosphatidylinositol-specific)
Omim ID	<u>600220</u>
Gene Ontology	Hyperlink
Gene Summary	Enzymes of the phospholipase C family catalyze the hydrolysis of phospholipids to yield diacylglyc erols and water-soluble phosphorylated derivatives of the lipid head groups. A number of these en zymes have specificity for phosphoinositides. Of the phosphoinositide-specific phospholipase C enzymes, C-beta is regulated by heterotrimeric G protein-coupled receptors, while the closely rela ted C-gamma-1 (PLCG1; MIM 172420) and C-gamma-2 enzymes are controlled by receptor tyro sine kinases. The C-gamma-1 and C-gamma-2 enzymes are composed of phospholipase domai ns that flank regions of homology to noncatalytic domains of the SRC oncogene product, SH2 and SH3.[supplied by OMIM
Other Designations	phospholipase C gamma 2 phospholipase C, gamma 2 phospholipase C, gamma 2 (phosphatid ylyinositol-specific)
