

CDKN1A monoclonal antibody, clone AC8

Catalog # MAB20866

Size 100 ug

Specification

Product Description	Mouse monoclonal antibody raised against full length recombinant human CDKN1A.
----------------------------	--

Immunogen	Recombinant protein corresponding to full length human CDKN1A.
------------------	--

Host	Mouse
-------------	-------

Theoretical MW (kDa)	21
-----------------------------	----

Reactivity	Human
-------------------	-------

Form	Liquid
-------------	--------

Purification	Protein A/G purification
---------------------	--------------------------

Isotype	IgG1, kappa
----------------	-------------

Recommend Usage	ELISA (1-5 ug/mL) Immunofluorescence (1-2 ug/mL) Immunoprecipitation (1-2 ug/500 ug protein lysate) Western Blot (0.5-1 ug/mL) The optimal working dilution should be determined by the end user.
------------------------	---

Storage Buffer	In 10 mM PBS.
-----------------------	---------------

Storage Instruction	Store at -20 to -80°C. Aliquot to avoid repeated freezing and thawing.
----------------------------	---

Applications

- Western Blot
- Immunofluorescence
- Immunoprecipitation

- Enzyme-linked Immunoabsorbent Assay

Gene Info — CDKN1A

Entrez GeneID [1026](#)

Protein Accession# [P38936](#)

Gene Name CDKN1A

Gene Alias CAP20, CDKN1, CIP1, MDA-6, P21, SDI1, WAF1, p21CIP1

Gene Description cyclin-dependent kinase inhibitor 1A (p21, Cip1)

Omim ID [116899](#)

Gene Ontology [Hyperlink](#)

Gene Summary This gene encodes a potent cyclin-dependent kinase inhibitor. The encoded protein binds to and inhibits the activity of cyclin-CDK2 or -CDK4 complexes, and thus functions as a regulator of cell cycle progression at G1. The expression of this gene is tightly controlled by the tumor suppressor protein p53, through which this protein mediates the p53-dependent cell cycle G1 phase arrest in response to a variety of stress stimuli. This protein can interact with proliferating cell nuclear antigen (PCNA), a DNA polymerase accessory factor, and plays a regulatory role in S phase DNA replication and DNA damage repair. This protein was reported to be specifically cleaved by CASP3-like caspases, which thus leads to a dramatic activation of CDK2, and may be instrumental in the execution of apoptosis following caspase activation. Two alternatively spliced variants, which encode an identical protein, have been reported. [provided by RefSeq]
