

CCR5 monoclonal antibody, clone 12D1

Catalog # MAB21156 Size 100 ug

Applications

Immunohistochemistry (Frozen sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human Stomach tissue.

Immunofluorescence

Immunofluorescence staining of PFA-fixed HeLa cells with Cat# MAB21156 ; followed by goat anti-mouse IgG conjugated to CF488 (green).

Flow Cytometry

Flow cytometric analysis of MCF-7 cells with Cat# MAB21156; followed by goat anti-mouse IgG-CF488 (Blue) and Isotype Control (Red).

Specification

Product Description	Mouse monoclonal antibody raised against human CCR5.
Immunogen	Native purified human CCR5.
Host	Mouse
Theoretical MW (kDa)	45
Reactivity	Human
Form	Liquid
Purification	Protein A/G purification
Isotype	IgG2a, kappa
Recommend Usage	Flow Cytometry (1-2 ug/10 ⁶ cells) Immunofluorescence (1-2 ug/mL) Immunohistochemistry (Frozen sections) (1-2 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In 10 mM PBS.
Storage Instruction	Store at -20 to -80°C. Aliquot to avoid repeated freezing and thawing.

Applications

- Immunohistochemistry (Frozen sections)

Immunohistochemical staining (Formalin-fixed paraffin-embedded sections) of human Stomach tissue.

- Immunofluorescence

Immunofluorescence staining of PFA-fixed HeLa cells with Cat# MAB21156 ; followed by goat anti-mouse IgG conjugated to CF488 (green).

- Flow Cytometry

Flow cytometric analysis of MCF-7 cells with Cat# MAB21156; followed by goat anti-mouse IgG-CF488 (Blue) and Isotype Control (Red).

Gene Info — CCR5

Entrez GeneID

Protein Accession#	P51681
Gene Name	CCR5
Gene Alias	CC-CKR-5, CCCKR5, CD195, CKR-5, CKR5, CMKBR5, IDDM22
Gene Description	chemokine (C-C motif) receptor 5
Omim ID	601373 610379
Gene Ontology	Hyperlink
Gene Summary	This gene encodes a member of the beta chemokine receptor family, which is predicted to be a seven transmembrane protein similar to G protein-coupled receptors. This protein is expressed by T cells and macrophages, and is known to be an important co-receptor for macrophage-tropic virus, including HIV, to enter host cells. Defective alleles of this gene have been associated with the HIV infection resistance. The ligands of this receptor include monocyte chemoattractant protein 2 (MCP-2), macrophage inflammatory protein 1 alpha (MIP-1 alpha), macrophage inflammatory protein 1 beta (MIP-1 beta) and regulated on activation normal T expressed and secreted protein (RANTES). Expression of this gene was also detected in a promyeloblastic cell line, suggesting that this protein may play a role in granulocyte lineage proliferation and differentiation. This gene is located at the chemokine receptor gene cluster region. Two transcript variants encoding the same protein have been found for this gene. [provided by RefSeq]
Other Designations	C-C chemokine receptor 5 C-C chemokine receptor type 5 CCR5 chemokine receptor chemokine (C-C) receptor 5 chemokine receptor CCR5 chemr13
