Entrez GeneID	101
Protein Accession#	P78325
Gene Name	ADAM8
Gene Alias	CD156, MGC134985, MS2
Gene Description	ADAM metallopeptidase domain 8
Omim ID	602267
Gene Ontology	Hyperlink
Gene Summary	<p>This gene encodes a member of the ADAM (a disintegrin and metalloprotease domain) family. Members of this family are membrane-anchored proteins structurally related to snake venom disintegrins, and have been implicated in a variety of biological processes involving cell-cell and cell-matrix interactions, including fertilization, muscle development, and neurogenesis. The protein encoded by this gene may be involved in cell adhesion during neurodegeneration, and it is thought to be a target for allergic respiratory diseases, including asthma. Alternative splicing results in multiple transcript variants. [provided by RefSeq]</p>
