

RecomAb™

AKT1 (E17K mutant) monoclonal antibody, clone RM336

Catalog # MAB21967 Size 50 ug

Applications

Western Blot (Transfected lysate)

Western Blot (Transfected lysate) analysis of (1) 293T transfected with a DNA construct encoding the Akt E17K mutant, and (2) untransfected 293T.

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining of 293T cells transfected with a DNA construct encoding the Akt E17K mutation or Histone H3.3.

Specification

Product Description	Rabbit recombinant monoclonal antibody raised against AKT1 (E17K mutant).
Antibody Species	Rabbit
Immunogen	Original antibody is raised against a synthetic peptide corresponding to AKT1 (E17K mutant).
Specificity	This antibody reacts to the Akt E17K mutant. No cross reactivity with wild type Akt.

Form	Liquid
Purification	Protein A purification
Isotype	IgG
Recommend Usage	ELISA (0.05 ug/mL-0.5 ug/mL) Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections) (0.2 ug/mL-1 ug/mL) Western Blot (0.1 ug/mL-0.5 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS (50% glycerol, 1% BSA, 0.09% sodium azide)
Storage Instruction	Store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Transfected lysate)

Western Blot (Transfected lysate) analysis of (1) 293T transfected with a DNA construct encoding the Akt E17K mutant, and (2) untransfected 293T.

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemical staining of 293T cells transfected with a DNA construct encoding the Akt E17K mutation or Histone H3.3.

- Enzyme-linked Immunoabsorbent Assay

Gene Info — AKT1

Entrez GeneID	207
Gene Name	AKT1
Gene Alias	AKT, MGC99656, PKB, PKB-ALPHA, PRKBA, RAC, RAC-ALPHA
Gene Description	v-akt murine thymoma viral oncogene homolog 1
Omim ID	164730 181500
Gene Ontology	Hyperlink

Gene Summary

The serine-threonine protein kinase encoded by the AKT1 gene is catalytically inactive in serum-starved primary and immortalized fibroblasts. AKT1 and the related AKT2 are activated by platelet-derived growth factor. The activation is rapid and specific, and it is abrogated by mutations in the pleckstrin homology domain of AKT1. It was shown that the activation occurs through phosphatidylinositol 3-kinase. In the developing nervous system AKT is a critical mediator of growth factor-induced neuronal survival. Survival factors can suppress apoptosis in a transcription-independent manner by activating the serine/threonine kinase AKT1, which then phosphorylates and inactivates components of the apoptotic machinery. Multiple alternatively spliced transcript variants have been found for this gene. [provided by RefSeq]

Other Designations

RAC-alpha serine/threonine-protein kinase|murine thymoma viral (v-akt) oncogene homolog-1|protein kinase B|rac protein kinase alpha
