Gene Info — GSTP1

Entrez GeneID	2950
Gene Name	GSTP1
Gene Alias	DFN7, FAEES3, GST3, PI

Gene Description	glutathione S-transferase pi 1
Omim ID	134660
Gene Ontology	Hyperlink
Gene Summary	Glutathione S-transferases (GSTs) are a family of enzymes that play an important role in detoxification by catalyzing the conjugation of many hydrophobic and electrophilic compounds with reduced glutathione. Based on their biochemical, immunologic, and structural properties, the soluble GSTs are categorized into 4 main classes: alpha, mu, pi, and theta. This GST family member is a polymorphic gene encoding active, functionally different GSTP1 variant proteins that are thought to function in xenobiotic metabolism and play a role in susceptibility to cancer, and other diseases. Other Designations	OTTHUMP00000174659 deafness, X-linked 7 fatty acid ethyl ester synthase III glutathione transferase
