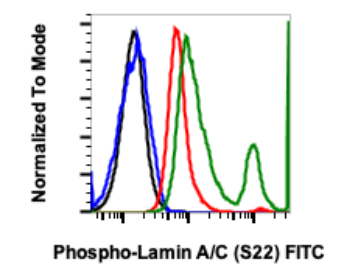
LMNA (phospho S22) monoclonal antibody, clone CF12 (FITC)

Catalog # MAB23552 Size 100 Reactions

Applications



Flow Cytometry

Flow cytometric analysis of HeLa cells with LMNA (phospho S22) monoclonal antibody, clone CF12 (FITC) (Cat # MAB23552). Unstained as untreated (red) or treated (green), concentration matched isotype control Cat #2143 for untreated (black) or treated with nocodazole (blue).

Specification

Product Description	Rabbit monoclonal antibody raised against synthetic phosphopeptide of human LMNA.
Immunogen	A synthetic phosphopeptide corresponding to residues surrounding S22 of human Lamin A/C.
Host	Rabbit
Reactivity	Human
Form	Liquid
Conjugation	FITC
Purification	Protein A/G purification
Isotype	IgG1, kappa
Recommend Usage	Flow Cytometry (5 uL/10^6 cells) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, pH 7.4 (0.2% BSA, 0.09% sodium azide).
Storage Instruction	Store at 4°C.

Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which shoul d be handled by trained staff only.

Applications

- Flow Cytometry

  Flow cytometric analysis of HeLa cells with LMNA (phospho S22) monoclonal antibody, clone CF12 (FITC) (Cat # MAB23552). Unstained as untreated (red) or treated (green), concentration matched isotype control Cat #2143 for untreated (black) or treated with nocodazole (blue).

Gene Info — LMNA

Entrez GeneID	4000
Protein Accession#	P02545
Gene Name	LMNA
Gene Alias	CDCD1, CDDC, CMD1A, CMT2B1, EMD2, FPL, FPLD, HGPS, IDC, LDP1, LFP, LGMD1B, LM N1, LMNC, PRO1
Gene Description	lamin A/C
Omim ID	115200 150330 151660 159001 176670 181350 248370 275210 277700 604929 605588 607 920 608056
Gene Ontology	Hyperlink
Gene Summary	The nuclear lamina consists of a two-dimensional matrix of proteins located next to the inner nucle ar membrane. The lamin family of proteins make up the matrix and are highly conserved in evoluti on. During mitosis, the lamina matrix is reversibly disassembled as the lamin proteins are phosph orylated. Lamin proteins are thought to be involved in nuclear stability, chromatin structure and ge ne expression. Vertebrate lamins consist of two types, A and B. Through alternate splicing, this ge ne encodes three type A lamin isoforms. Mutations in this gene lead to several diseases: Emery-Dreifuss muscular dystrophy, familial partial lipodystrophy, limb girdle muscular dystrophy, dilated cardiomyopathy, Charcot-Marie-Tooth disease, and Hutchinson-Gilford progeria syndrome. [provi ded by RefSeq
Other Designations	70 kDa lamin|OTTHUMP00000015843|OTTHUMP00000015848

Pathway

- Arrhythmogenic right ventricular cardiomyopathy (ARVC)

- Hypertrophic cardiomyopathy (HCM)
