

BRCA1 monoclonal antibody, clone KEN

Catalog # MAB2363 Size 100 uL

Applications

Western Blot (Cell lysate)

Western blot analysis of BRCA1 in U-2 OS whole cell lysate using BRCA1 monoclonal antibody, clone KEN (Cat # MAB2363). 1 minute ECL Western blot analysis.

Western Blot (Cell lysate)

Western blot analysis of BRCA1 using BRCA1 monoclonal antibody, clone KEN (Cat # MAB2363).

Specification

Product Description	Mouse monoclonal antibody raised against partial recombinant BRCA1.
Immunogen	Recombinant protein corresponding to amino acids 1314-1864 of human BRCA1.
Host	Mouse
Reactivity	Human
Specificity	This antibody recognizes the epitope aa 1314-1600.
Form	Liquid
Quality Control Testing	Antibody Reactive Against Recombinant Protein.

Recommend Usage	Immunocytochemistry (1:100) Western Blot (2-4 ug/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In buffer containing 0.05% sodium azide
Storage Instruction	Store at -20°C or -80°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Cell lysate)

Western blot analysis of BRCA1 in U-2 OS whole cell lysate using BRCA1 monoclonal antibody, clone KEN (Cat # MAB2363). 1 minute ECL Western blot analysis.

- Western Blot (Cell lysate)

Western blot analysis of BRCA1 using BRCA1 monoclonal antibody, clone KEN (Cat # MAB2363).

- Immunocytochemistry

- Immunofluorescence

- Immunoprecipitation

Gene Info — BRCA1

Entrez GeneID	672
Protein Accession#	P38398
Gene Name	BRCA1
Gene Alias	BRCAI, BRCC1, IRIS, PSCP, RNF53
Gene Description	breast cancer 1, early onset
Omim ID	113705
Gene Ontology	Hyperlink

Gene Summary

This gene encodes a nuclear phosphoprotein that plays a role in maintaining genomic stability, and it also acts as a tumor suppressor. The encoded protein combines with other tumor suppressors, DNA damage sensors, and signal transducers to form a large multi-subunit protein complex known as the BRCA1-associated genome surveillance complex (BASC). This gene product associates with RNA polymerase II, and through the C-terminal domain, also interacts with histone deacetylase complexes. This protein thus plays a role in transcription, DNA repair of double-stranded breaks, and recombination. Mutations in this gene are responsible for approximately 40% of inherited breast cancers and more than 80% of inherited breast and ovarian cancers. Alternative splicing plays a role in modulating the subcellular localization and physiological function of this gene. Many alternatively spliced transcript variants, some of which are disease-associated mutations, have been described for this gene, but the full-length nature of only some of these variants has been described. A related pseudogene, which is also located on chromosome 17, has been identified. [provided by RefSeq]

Other Designations

BRCA1/BRCA2-containing complex, subunit 1|breast and ovarian cancer susceptibility protein 1
