

CD209 monoclonal antibody, clone 8B6

Catalog # MAB2749

Size 100 ug

Applications

Western Blot (Tissue lysate)

Western blot detection of CD209 fusion protein in human uterus tissue lysate at (A) 1 and (B) 2 ug/mL .

Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemistry of CD209 in human lymph node tissue with CD209 monoclonal antibody, clone 8B6 (Cat # MAB2749) at 10 ug/mL .

Specification

Product Description

Mouse monoclonal antibody raised against recombinant CD209.

Immunogen

Recombinant His fusion protein corresponding to extracellular region of human CD209.

Host

Mouse

Reactivity

Human

Form

Liquid

Isotype

IgG

Recommend Usage	Western Blot (1-2 mg/mL) Immunohistochemistry (5-10 mg/mL) The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS (0.02% sodium azide)
Storage Instruction	Store at 4°C for three months. For long term storage store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Western Blot (Tissue lysate)

Western blot detection of CD209 fusion protein in human uterus tissue lysate at (A) 1 and (B) 2 ug/mL .

- Immunohistochemistry (Formalin/PFA-fixed paraffin-embedded sections)

Immunohistochemistry of CD209 in human lymph node tissue with CD209 monoclonal antibody, clone 8B6 (Cat # MAB2749) at 10 ug/mL .

Gene Info — CD209

Entrez GeneID	30835
Protein Accession#	n/a
Gene Name	CD209
Gene Alias	CDSIGN, CLEC4L, DC-SIGN, DC-SIGN1, MGC129965
Gene Description	CD209 molecule
Omim ID	604672 607948 609423
Gene Ontology	Hyperlink

Gene Summary

This gene encodes a transmembrane receptor and is often referred to as DC-SIGN because of its expression on the surface of dendritic cells and macrophages. The encoded protein is involved in the innate immune system and recognizes numerous evolutionarily divergent pathogens ranging from parasites to viruses with a large impact on public health. The protein is organized into three distinct domains: an N-terminal transmembrane domain, a tandem-repeat neck domain and C-type lectin carbohydrate recognition domain. The extracellular region consisting of the C-type lectin and neck domains has a dual function as a pathogen recognition receptor and a cell adhesion receptor by binding carbohydrate ligands on the surface of microbes and endogenous cells. The neck region is important for homo-oligomerization which allows the receptor to bind multivalent ligands with high avidity. Variations in the number of 23 amino acid repeats in the neck domain of this protein are rare but have a significant impact on ligand binding ability. This gene is closely related in terms of both sequence and function to a neighboring gene (GeneID 10332; often referred to as L-SIGN). DC-SIGN and L-SIGN differ in their ligand-binding properties and distribution. Alternative splicing results in multiple variants

Other Designations

C-type lectin domain family 4, member L|CD209 antigen|Dendritic cell-specific intracellular adhesion molecules (ICAM)-3 grabbing non-integrin
