

HLA-E monoclonal antibody, clone MEM-E/06

Catalog # MAB3630

Size 100 ug

Specification

Product Description	Mouse monoclonal antibody raised against recombinant HLA-E.
Immunogen	Recombinant protein corresponding to human HLA-E.
Host	Mouse
Reactivity	Human, Primates
Specificity	This antibody recognized native surface-expressed HLA-E, but not denaturated heavy chain of HLA-E. HLA-E belongs to the MHC Class I molecules (MHC Class Ib; nonclassical) and it is expressed on many types of the human cells. The published results showed that This antibody cross-reacts with some classical MHC Class I molecules (HLA-A3, -A11, -B7). However, the recent Workshop I Session on the 3rd International Conference on HLA-G (Paris, July 2003) confirmed that This antibody exhibit s much broader cross-reactivity classical MHC Class I antigens, namely with HLA-A24, -A32,-B8, -B15, -B27, -B35, -B44, -B54, -C3, -C4, -C5, -C7.
Form	Liquid
Concentration	1 mg/mL
Isotype	IgG1
Recommend Usage	The optimal working dilution should be determined by the end user.
Storage Buffer	In TBS, pH 8.0 (0.09% sodium azide)
Storage Instruction	Store at 4°C. Do not freeze.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Immunoprecipitation
- Flow Cytometry

Gene Info — HLA-E

Entrez GeneID	3133
Gene Name	HLA-E
Gene Alias	DKFZp686P19218, EA1.2, EA2.1, HLA-6.2, MHC, QA1
Gene Description	major histocompatibility complex, class I, E
Omim ID	143010
Gene Ontology	Hyperlink
Gene Summary	HLA-E belongs to the HLA class I heavy chain paralogues. This class I molecule is a heterodimer consisting of a heavy chain and a light chain (beta-2 microglobulin). The heavy chain is anchored in the membrane. HLA-E binds a restricted subset of peptides derived from the leader peptides of other class I molecules. The heavy chain is approximately 45 kDa and its gene contains 8 exons. Exon one encodes the leader peptide, exons 2 and 3 encode the alpha1 and alpha2 domains, which both bind the peptide, exon 4 encodes the alpha3 domain, exon 5 encodes the transmembrane region, and exons 6 and 7 encode the cytoplasmic tail. [provided by RefSeq]
Other Designations	HLA class I histocompatibility antigen, E alpha chain MHC HLA-E alpha-1 MHC HLA-E alpha-2.1 MHC class I antigen OTTHUMP00000029214 lymphocyte antigen
