

ITGB2 monoclonal antibody, clone MEM-48 (PE)

Catalog # MAB4599 Size 100 Reactions

Applications

Flow Cytometry

Surface staining of human peripheral blood cells with ITGB2 monoclonal antibody, clone MEM-48 (PE) (Cat # MAB4599).

Cells in the granulocyte gate were used for analysis.

Specification

Product Description	Mouse monoclonal antibody raised against native ITGB2.
Immunogen	Native purified ITGB2 from leukocytes of patient suffering from LGL-type leukaemia.
Host	Mouse
Reactivity	Human
Specificity	This antibody MEM-48 recognizes an epitope involving residues 534-546 in cysteine-rich repeat 3 of the CD18 antigen (integrin $\beta 2$ subunit; $\beta 2$ integrin). CD18 is a 90-95 KDa type I transmembrane protein expressed on all leukocytes.
Form	Liquid
Conjugation	PE
Isotype	IgG1
Recommend Usage	Flow Cytometry (20 μ l in human blood cells 100 μ l in whole blood or 10^6 cells in a suspension) The optimal working dilution should be determined by the end user.

Storage Buffer	In PBS (0.2% BSA, 0.09% sodium azide)
Storage Instruction	Store in the dark at 4°C. Do not freeze. Avoid prolonged exposure to light. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Flow Cytometry

Surface staining of human peripheral blood cells with ITGB2 monoclonal antibody, clone MEM-48 (PE) (Cat # MAB4599). Cells in the granulocyte gate were used for analysis.

Gene Info — ITGB2

Entrez GeneID	3689
Gene Name	ITGB2
Gene Alias	CD18, LAD, LCAMB, LFA-1, MAC-1, MF17, MFI7
Gene Description	integrin, beta 2 (complement component 3 receptor 3 and 4 subunit)
Omim ID	116920 600065
Gene Ontology	Hyperlink

Gene Summary	The product of this gene belongs to the integrin beta chain family of proteins. Integrins are integral cell-surface proteins composed of an alpha chain and a beta chain. This gene encodes the integrin beta chain beta 2. A given chain may combine with multiple partners resulting in different integrins. For example, beta 2 combines with the alpha L chain to form the integrin LFA-1, and combines with the alpha M chain to form the integrin Mac-1. Integrins are known to participate in cell adhesion as well as cell-surface mediated signalling. Defects in this gene are the cause of leukocyte adhesion deficiency type I (LAD1). Two transcript variants encoding the same protein have been identified for this gene. [provided by RefSeq]
