

F12 monoclonal antibody, clone B3336M

Catalog # MAB4702 Size 250 ug

Specification

Product Description	Mouse monoclonal antibody raised against F12.
Immunogen	Purified human F12.
Host	Mouse
Reactivity	Human
Specificity	Reacts with the light chain of human Factor XII and at 100 nM inhibits 50% of Factor XII activity.
Form	Liquid
Isotype	IgG1
Recommend Usage	The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS, pH 7.4.
Storage Instruction	Store at -20°C to -80°C. Aliquot to avoid repeated freezing and thawing.

Applications

- Enzyme-linked Immunoabsorbent Assay

Gene Info — F12

Entrez GeneID	2161
Gene Name	F12
Gene Alias	HAE3, HAEX, HAF

Gene Description	coagulation factor XII (Hageman factor)
Omim ID	234000 610618 610619
Gene Ontology	Hyperlink
Gene Summary	This gene encodes coagulation factor XII which circulates in blood as a zymogen. This single chain zymogen is converted to a two-chain serine protease with an heavy chain (alpha-factor XIIa) and a light chain. The heavy chain contains two fibronectin-type domains, two epidermal growth factor (EGF)-like domains, a kringle domain and a proline-rich domain, whereas the light chain contains only a catalytic domain. On activation, further cleavages takes place in the heavy chain, resulting in the production of beta-factor XIIa light chain and the alpha-factor XIIa light chain becomes beta-factor XIIa heavy chain. Prekallikrein is cleaved by factor XII to form kallikrein, which then cleaves factor XII first to alpha-factor XIIa and then to beta-factor XIIa. The active factor XIIa participates in the initiation of blood coagulation, fibrinolysis, and the generation of bradykinin and angiotensin. It activates coagulation factors VII and XI. Defects in this gene do not cause any clinical symptoms and the sole effect is that whole-blood clotting time is prolonged. [provided by RefSeq]
Other Designations	Hageman factor coagulation factor XII
