Gene Info — LPL

Entrez GeneID [4023](#)

Gene Name LPL

Gene Alias HDLCQ11, LIPD

Gene Description lipoprotein lipase

Omim ID [144250](#) [238600](#) [609708](#)

Gene Ontology [Hyperlink](#)

Gene Summary LPL encodes lipoprotein lipase, which is expressed in heart, muscle, and adipose tissue. LPL functions as a homodimer, and has the dual functions of triglyceride hydrolase and ligand/bridging factor for receptor-mediated lipoprotein uptake. Severe mutations that cause LPL deficiency result in type I hyperlipoproteinemia, while less extreme mutations in LPL are linked to many disorders of lipoprotein metabolism. [provided by RefSeq]
