

IFNG monoclonal antibody, clone B27 (FITC)

Catalog # MAB5864 Size 100 Reactions

Applications

Flow Cytometry

Flow Cytometry of PMA and ionomycin stimulated human peripheral blood lymphocytes were stained with Mouse Anti-Human CD3-PE followed by intracellular staining with IFNG monoclonal antibody, clone B27 (FITC).

Specification

Product Description	Mouse monoclonal antibody raised against recombinant IFNG.
Immunogen	Recombinant protein corresponding to human IFNG.
Host	Mouse
Reactivity	Human
Specificity	human Interferon-gamma (IFN-gamma)1-2. This is a neutralizing antibody. B27 monoclonal antibody has been used for epitope mapping of human IFN-gamma1. The B27 antibody does not bind to denatured IFN-gamma1.
Form	Liquid
Conjugation	FITC
Isotype	IgG1, kappa
Recommend Usage	Flow Cytometry (10 uL/10 ⁶ cells): suggested use of the reagent is in a final volume of 100 uL. The optimal working dilution should be determined by the end user.
Storage Buffer	In PBS (0.09% sodium azide)

Storage Instruction

Store at 4°C. Do not freeze.

Note

This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Applications

- Flow Cytometry

Flow Cytometry of PMA and ionomycin stimulated human peripheral blood lymphocytes were stained with Mouse Anti-Human CD3-PE followed by intracellular staining with IFNG monoclonal antibody, clone B27 (FITC).

Gene Description

interferon, gamma

Omim ID[147570](#) [191100](#) [607948](#) [609135](#) [609423](#)**Gene Ontology**[Hyperlink](#)**Gene Summary**

Interferon-gamma (IFNG), or type II interferon, is a cytokine critical for innate and adaptive immunity against viral and intracellular bacterial infections and for tumor control. Aberrant IFNG expression is associated with a number of autoinflammatory and autoimmune diseases. The importance of IFNG in the immune system stems in part from its ability to inhibit viral replication directly, but most importantly derives from its immunostimulatory and immunomodulatory effects. IFNG is produced predominantly by natural killer (NK) and natural killer T (NKT) cells as part of the innate immune response, and by CD4 (MIM 186940) and CD8 (see MIM 186910) cytotoxic T lymphocyte (CTL) effector T cells once antigen-specific immunity develops (Schoenborn and Wilson, 2007 [PubMed 17981204]).[supplied by OMIM]
