

# XBP1 monoclonal antibody, clone 3H1G4

Catalog # MAB7873

Size 100 ug

## Applications

### Western Blot (Recombinant protein)

Western blot analysis of 100 ng of XBP1 recombinant protein with XBP1 monoclonal antibody, clone 3H1G4 (Cat # MAB7873) at 1 ug/mL .

### Immunocytochemistry

Immunocytochemistry of XBP1 in HepG2 cells with XBP1 monoclonal antibody, clone 3H1G4 (Cat # MAB7873) at 2 ug/mL .

## Specification

<b>Product Description</b>	Mouse monoclonal antibody raised against partial recombinant XBP1.
<b>Immunogen</b>	Recombinant protein corresponding to amino acids 2-160 of human XBP1.
<b>Host</b>	Mouse
<b>Reactivity</b>	Human, Mouse, Rat
<b>Form</b>	Liquid
<b>Recommend Usage</b>	Western Blot (0.5 ug/mL) The optimal working dilution should be determined by the end user.

Storage Buffer	In PBS (0.02% sodium azide)
Storage Instruction	Store at 4°C for three months. For long term storage store at -20°C. Aliquot to avoid repeated freezing and thawing.
Note	This product contains sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

## Applications

- Western Blot (Recombinant protein)

Western blot analysis of 100 ng of XBP1 recombinant protein with XBP1 monoclonal antibody, clone 3H1G4 (Cat # MAB7873) at 1 ug/mL .

- Immunocytochemistry

Immunocytochemistry of XBP1 in HepG2 cells with XBP1 monoclonal antibody, clone 3H1G4 (Cat # MAB7873) at 2 ug/mL .

- Enzyme-linked Immunoabsorbent Assay

## Gene Info — XBP1

Entrez GeneID	<a href="#">7494</a>
Protein Accession#	<a href="#">BAB82982</a>
Gene Name	XBP1
Gene Alias	TREB5, XBP2
Gene Description	X-box binding protein 1
Omim ID	<a href="#">125480</a> <a href="#">194355</a>
Gene Ontology	<a href="#">Hyperlink</a>

**Gene Summary**

This gene encodes a transcription factor that regulates MHC class II genes by binding to a promoter element referred to as an X box. This gene product is a bZIP protein, which was also identified as a cellular transcription factor that binds to an enhancer in the promoter of the T cell leukemia virus type 1 promoter. It may increase expression of viral proteins by acting as the DNA binding partner of a viral transactivator. It has been found that upon accumulation of unfolded proteins in the endoplasmic reticulum (ER), the mRNA of this gene is processed to an active form by an unconventional splicing mechanism that is mediated by the endonuclease inositol-requiring enzyme 1 (IRE1). The resulting loss of 26 nt from the spliced mRNA causes a frame-shift and an isoform XBP1(S), which is the functionally active transcription factor. The isoform encoded by the unspliced mRNA, XBP1(U), is constitutively expressed, and thought to function as a negative feedback regulator of XBP1(S), which shuts off transcription of target genes during the recovery phase of ER stress. A pseudogene of XBP1 has been identified and localized to chromosome 5. [provided by RefSeq]
